DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1 and 2 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The claims do not comply with the written description requirement since the component "R" is never properly defined. Even the specification does not adequately define the "R" component. There is no chemical structure for "R" and since that is the case is it not clear what "R" is. It is defined as derived from cold pressed cranberry but without a chemical structure of it, it is not adequately defined by the instant specification. The rest of the molecule seems to be properly described but not the "R" part of the molecule. While the specification does list acid components of the "R" component, the specification never adequately provides a written description of what "R" actually is, i.e. the structure of "R".

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1 and 2 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims are vague and infinite since it is confusing what "R". Half of the compound seems to be defined but the "R" component simply is not. There is nothing in the specification which makes it clear what "R" is or the structure of "R".
